

## Automatic Configuration of Outlook 2013 for Hosted Exchange 2016

1. Navigate to Windows Control Panel > Mail > Show Profiles > Add. Specify your Profile Name and click OK.
2. On the Auto Account Setup page type your name, primary email address, and your mailbox password twice, then click Next.

3. Outlook 2016 will start configuring your account. When you get a security prompt, check the box Don't ask me about this website again and then click Allow.

4. Windows Security window might then prompt your user name and password. Enter your primary email address in the User name box and type your mailbox password and click.
5. Outlook 2016 will discover your email server settings finish configuration of your email account. Once you see all steps as completed, you can click Finish. Now you can open your new profile in Outlook 2016.
